HAMMERSMITH

Controlled Demolition

The remodeling and renovation of existing commercial, retail and office buildings pose some unique challenges for architects, engineers and contractors when compared to new construction.

Typically, this fast growing segment of the construction industry requires demolition while tenants and neighbors work and live near by. Noise, dust, and vibration are just a few of the concerns. These challenges are being met by controlled demolition services performed by Hammersmith Limited

In addition, new commercial construction can also be aided by these advanced techniques. Builders are using trained contractors to create openings in concrete floors and walls for floor-to-floor direct access plumbing, electrical conduit and HVAC, instead of installing forms before the concrete pour.
